

The automated CCS-2100LT is a cold-cranking simulator for measuring apparent viscosity of engine oils from -40 °C to -5 °C. Automated sample loading, operation and solvent-free cleaning permit unattended processing of up to 30 samples at one time.

#### Common Applications

- Engine oils
- Lubricating oils
- Base stocks

# CCS-2100LT

## Automated Cold-Cranking Simulator

For Apparent Viscosity of Engine Oils from -40 °C to -5 °C  
ASTM D5293, SAE J300

### Product Features & Benefits

Meets all ASTM D5293 and SAE J300 requirements and precision specifications

- Instrument temperature range: -40 °C to -5 °C ( $\pm 0.05$  °C)
- Viscosity range: 900 mPa·s [cP] to 25,000 mPa·s [cP]

### Fully automated operation

- Automated sample loading and computer controlled testing of up to 30 samples at one time
- Unattended operation reduces operator-to-operator variability for enhanced repeatability and reproducibility
- Proprietary software automatically calculates and records sample viscosities based on test data and stored rotor/stator calibration information
- The system automatically purges the previously measured sample with a portion of the next sample prior to viscosity measurement

### Outstanding measurement control

- Features a patented, thermoelectrically-cooled rotor/stator for outstanding temperature management
- Rotor speed is automatically measured by a high resolution digital encoder

### Reliable, convenient performance

- Proven CANNON® reliability and outstanding support
- A thermoelectric sample warming cycle greatly improves sample flushing allowing solvent-free cleaning
- User interface options include an instrument calibration routine, configuration of test cycles, and multiple data output options including save, print, and export for LIMS capture
